PROFESSIONAL SUMMARY

Senior Frontend Developer with 6+ years building OTT streaming platforms across Web, Smart TV (LG WebOS, Samsung Tizen, VIZIO) and Chromecast. Co-architected 4 Smart TV apps from scratch — all published to TV stores. Built 4 multi-tenant web platforms and a CMS from scratch as initial sole developer. Cut bundle size by 80%+ (80MB → 12MB) and resolved critical memory/performance issues on legacy devices (Chrome 38+). Comfortable operating as both an independent contributor and a collaborative team member in fast-paced, product-driven environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3/SCSS

Frameworks: React.js, Next.js, Node.js, Express.js, Laravel (PHP)

Streaming & TV: HLS/DASH Adaptive Streaming, DRM (Widevine/FairPlay), Chromecast, LG WebOS, Samsung Tizen, VIZIO SmartCast

State & Testing: Redux, Context API, XState, Cypress (E2E), Chrome Lighthouse

UI / Styling: Tailwind CSS, Material UI (MUI), Styled Components, Responsive Design, 10-foot UI

DevOps & Tools: Git, GitLab CI/CD, Docker, Webpack, Babel, AWS S3, Vercel

Integration: Firebase, Mux, Google Analytics/GTM, OneSignal, Google DFP Ads, Stripe, PayPal, MoMo

AI & Productivity: Claude AI, AI-assisted code analysis & debugging, prompt engineering

WORK EXPERIENCE

Senior Frontend Developer — Youthdev Company

Apr 2022 – Present

Smart TV & OTT — Co-architect of TV applications across 3 platforms

Co-architected and developed Smart TV applications from scratch with one other developer, delivering Netflix-like streaming experiences across LG, Samsung, VIZIO, and Chromecast.

- **Designed and shipped 4 Smart TV apps from scratch** (OnDemandKorea, Amasian, SCTV Online, LG Channel VN) for LG WebOS, Samsung Tizen, and VIZIO — all successfully published to TV app stores (.ipk/.wgt submissions).
- **Extended 2 apps** (Amasian, LG Channel VN) to hotel TV environments via LG ProCentric system, covering both consumer and hospitality deployment models
- **Cut bundle size** by 80%+ (80MB → ~12MB) through aggressive code splitting, tree shaking, lazy loading, and dead code elimination — critical for hardware-constrained TV devices.
- **Resolved memory leaks and optimized rendering** on low-end Smart TVs, including legacy devices running Chrome 38+ by implementing ES5 transpilation, polyfills, and memory-efficient DOM management.
- Integrated video analytics and tracking platforms (KCPA, Firebase, Mux) for content performance monitoring and user behavior analysis across all TV applications.
- Built Chromecast receiver applications using Google Cast SDK with KCPA integration, enabling stable cross-device casting and synchronized playback tracking.
- Designed and implemented 10-foot UI with full keyboard/remote navigation, ensuring a seamless user experience across all Smart TV platforms.
- **Continued supporting web/CMS platforms** on an as-needed basis after transitioning to Smart TV role.

Front-End Developer — Youthdev Company

Feb 2020 — Apr 2022

Web Platform & CMS — Built all web products from scratch as initial sole developer

Initial sole front-end developer who built the CMS and multi-tenant web platforms from scratch; onboarded a new team member after 3 months and continued as primary contributor.

- **Single-handedly built the CMS dashboard** using React-Admin, TypeScript, Styled Components, and Material UI — featuring multi-tenant architecture, RBAC user permissions, video upload to AWS S3 (multipart), live schedule management, and content/subscription management.
- **Developed 4 multi-tenant OTT web platforms** (OnDemandViet, SCTV Online, Muchomas, Illuon) with shared codebase architecture, reducing feature development time across tenants.
- **Implemented SSR** with Express.js and Node.js for SEO optimization, achieving significant improvements in Google PageSpeed and Lighthouse scores.
- Integrated 3 payment gateways (Stripe, PayPal, MoMo) with subscription billing, including upgrade/downgrade logic and recurring billing management.
- Integrated OneSignal push notifications, Firebase analytics, Mux video analytics, Google Analytics (gtag), and Google DFP ad serving for banner and in-video advertising.
- Built automated E2E testing suite with Cypress, improving release confidence and reducing regression bugs.
- Set up GitLab CI/CD pipelines and Docker-based workflows for consistent build and deployment processes.
- Established React best practices and clean code standards for the team through regular code reviews, pair programming, and onboarding documentation.

Trainee / Junior Full-Stack Developer — Youthdev Company

Jun 2019 – Feb 2020

Full-stack development on internal e-learning platform (Laravel)

- Built internal e-learning platform (Pi Project) on Laravel, featuring slide-based courses, flashcard systems, and audio course playback.
- Handled both back-end (models, controllers, API design) and front-end (HTML, CSS, UI templates) development, building a strong full-stack foundation.
- Continued contributing to the Pi Project on an as-needed basis for urgent feature requests during subsequent roles.

EDUCATION

Tay Nguyen University — Bachelor of Information Technology

2014 – 2019

Focus: Web Development & Algorithm Design

LANGUAGES

Vietnamese: Native · **English:** Intermediate (B1, working toward B2)
